

PC213 AND PC238: WEBINAR REQUEST

Webinar

How to Successfully Implement Project Server/Project Online: Questions Matter

Overview

Ask the right questions of your PMO can make or break your successful implementation Project Online.

One of Advisicon's MVPs, Cindy Lewis, will share with you her experiences in deploying Project Online/Project Server 2013 and where project management teams have delayed their return on investment (ROI) because they were not prepared for inquiries about their business. Cindy will dive into specific issues related to active directory sync, timesheets, task updates, project management maturity, business processes, proof of concept instances, resource management, and portfolio management deployment.

You will be shown examples of what does and doesn't work and how companies have had to repeat work in Project Online due to the facts that they missed critical discussions early on. Looking at Project Online is like sitting in the cockpit of an airplane. There are lots of options to get to cruising altitude in your implementation, however, you need to use the right combination of switches and dials just to get the aircraft engines to start.

Don't waste time guessing your way through how to get the plane off the ground, let an expert who has been flying this program for over 20 years get you off the ground.
